Profile

I am a highly motivated and creative Software Engineer with strong expertise in web development, specializing in both backend and frontend technologies. With a solid foundation in building scalable, user-friendly applications, I aim to leverage my knowledge and skills to develop impactful web solutions. I am eager to apply my technical abilities in a dynamic, challenging role within a forward-thinking organization.

Education

University of Hertfordshire

Jan 2025 – Present

M.sc in Software Engineering

- **Coursework:** TDD, Pair Programming, Agile Methodology, Extreme Programming

Sri Ramakrishna Engineering College

B.E Computer Science and Engineering

Sept 2020 – May 2024

- **Coursework:** Computer Architecture, Comparison of Learning Algorithms, Computational Theory.

Experience

Software Engineer Intern

Remote

NSDC -HCLTech

March 2025 – Present

- **Architected a high-performance, AI-driven e-commerce platform** using **React.js**, **.NET Core**, and **Azure**, delivering **personalized user experiences** through **AI-powered recommendation systems**, **inventory optimization models**, and **chatbot-assisted customer support**. This led to a **40% increase in user engagement** and a **30% boost in overall conversion rates**.
- Integrated **Azure Cognitive Services** to automate **sentiment analysis** on customer reviews, enabling data-driven product improvements and increasing **customer satisfaction scores by 25%** within the first three months of deployment.
- Gained hands-on experience with **Java and J2EE technologies** (Servlets, JSP, EJB, JPA), applying them to build scalable backend systems and understanding the full lifecycle of e-commerce platforms—from user interface to payment processing and logistics integration.

Full Stack Web development Engineer

Remote

Business Web Solutions

November 2024 – February 2025

- Spearheaded the development and deployment of a **scalable social media platform** on **Google Cloud**, utilizing **Node.js**, **Express.js** and **MongoDB** for back-end services, resulting in a **70% reduction** in page load times and a **50% decrease in operational costs** via cloud resource optimization.
- Integrated secure user authentication with **Passport.js** and **JWT**, ensuring confidentiality and controlled access to user data stored in **MongoDB**.
- Implemented core features including **post creation/viewing**, **friends' activity feeds**, and **profile management**, delivering a seamless and responsive user experience.

Web development Intern

Corizo Edutech

July 2024– November 2024

- Developed a fully functional **e-commerce website** using **Node.js** for server-side logic, with API endpoints built using **Express.js** and **Python**, enabling secure and efficient backend operations.
- **Implemented a cloud-based database architecture** using **MongoDB**, ensuring **high availability**

and **scalability**, which led to a **20% reduction in database load times** during high-volume transactions.

- Developed a **responsive, interactive front-end** using **React.js** with **UI/UX principles**, resulting in a **40% improvement in site performance** and a **15% increase in user retention**.

Full Stack Development Intern

Capabl (Elite Techno Groups)

April 2024– July 2024

- Developed two dynamic web platforms — a **Real-Time Weather Dashboard** and an **Indian Census Data Visualizer** — using **React.js**, **Node.js**, and REST APIs, integrating **Chart.js** and **D3.js** for engaging, data-driven visualizations.
- Applied **UI/UX principles** in **Figma** to design wireframes and prototypes, ensuring responsive, user-friendly interfaces across devices while maintaining high visual consistency and performance.
- Built backend services with **Express.js**, integrated **OpenWeatherMap** and **data.gov.in APIs**, and optimized application performance using **state management**, **component-based architecture**, and error handling strategies.

Web Application Development Intern

Intech Digital Solutions

September 2023– October 2023

- Developed a **highly functional web application** with **Python Flask** and **MySQL**, implementing **data management systems** for various user roles (Admin, Customer, Doctor, Pharmacist), ensuring smooth interactions and **95% user satisfaction** in a multi-role environment.
- Designed and implemented the user interface with HTML5, CSS3, JavaScript, and AngularJS, creating a responsive and intuitive experience for diverse user roles.
- Utilized Git for version control and followed GitFlow methodologies, while implementing role-based access for Admin, Customer, Doctor, and Pharmacist. Integrated jQuery for dynamic content updates and enhanced user functionality.

Work Experience programs

-
- | | |
|---|--|
| • Amazon Future career experience ↗ | • RIT-Prompt Engineering Internship - Excelerate ↗ |

| • Siemens Work Experience ↗ | • AI internship program – Kodacy ↗ |
| • Microsoft Ai Azure internship program | • AI techshaksam Intern - Microsoft and SAP |
| • Google AI-ML internship program – EduSkills | • Mern Full Stack development - EY |
| • Servicenow System administrator program | |

Projects

Little Lemon website using ReactJS - Meta

[Live demo](#) [↗](#)

[Github Repository](#): [↗](#)

- Built a full-stack restaurant reservation app with a responsive UI, enabling users to browse menus and book tables seamlessly using modern web technologies. Integrated RESTful APIs and managed application state, ensuring efficient data flow and dynamic updates across user-facing components.
- Implemented component-based architecture and version control (Git/GitHub) to support scalability, maintainability, and collaborative development.

Car dealership platform - IBM

[Live demo](#) [↗](#)

[Github Repository](#): [↗](#)

- Developed and deployed a full stack web application using Django and React, implementing RESTful APIs and integrating a SQLite database for end-to-end data management. Containerized the application with Docker and deployed it on IBM Cloud, leveraging Kubernetes and CI/CD pipelines for automated deployment and scalability.
- Collaborated using Git/GitHub for version control, and ensured code quality through unit testing and

debugging tools like PyTest, Postman, and browser dev tools.

Ecommerce complete Full stack application

[Live demo](#)

[Github Repository](#)

- Developed a full-stack e-commerce platform using the MERN stack (MongoDB, Express.js, React.js, Node.js), implementing secure user authentication, role-based access control, and real-time admin metrics for product management and order processing.
- Built dynamic frontend components with React.js and Redux, enabling features like shopping cart functionality, product filtering, and real-time updates, while integrating Axios for seamless communication with the backend APIs. Deployed the application on Vercel, integrating Cloudinary for media storage, easyInvoice API for order invoice generation, and ensuring smooth user interaction through notifications and responsive design.

HiLink

[Live demo](#)

[Github Repository](#)

- Developed a travel application using Next.js for server-side rendering (SSR) and static site generation (SSG), ensuring fast load times and SEO optimization. TypeScript was integrated to improve code quality, scalability, and error reduction.
- Designed a visually appealing and fully responsive user interface using TailwindCSS, featuring a dynamic hero section, an interactive camp exploration section, and a travel guide to enhance user engagement across devices.

Forest Fire Prediction and Detection – Group Project

- Developed a hybrid solution using SVM, Linear Regression, and Random Forest for forest fire risk prediction and **YOLO, RCNN, Faster RCNN** for image/video-based fire detection, ensuring high accuracy and responsiveness.
- Deployed the end-to-end system via a **Flask web app**, enabling users to input environmental or visual data and receive real-time prediction and detection results.

Fake News Detection - Group Project

- Built a fake news classification model using NLP techniques and fine-tuned a pre-trained **BERT model** with **AutoTokenizer** and the Transformers library for token encoding and decoding.
- Achieved high accuracy by leveraging BERT's deep contextual understanding to effectively detect and classify fake news from input text data.

Projects developed and verified Online:

- **Online Auction Server with ExpressJS**
- **Update a news website**
- **React and Typescript: Utility Types and Template Literals**
- **Build a CRUD Node.js and MongoDB employee management web-app**
- **React Working with high order components**
- **Azure :Create a REST API using NodeJS serverless functions**
- **Set up a Continuous Integration(CI) workflow in CircleCI**
- **Deploying a Python Flask web application to App Engine Flexible**

Specialization and course certificates

Full stack development specialization - **Capabl**

Programming with JavaScript – **Meta**

Mean stack development specialization – **Onboard Infinity**

Full stack Web development – **Amazon**

Frontend development using Angular - **Onboard Infinity**

AI and ML Engineering Professional certificate -**Microsoft**

Frontend development professional certificate - **Meta**

Technologies

Languages: C++, C, Java, Python, Scala, Objective-C, C#, JavaScript, Typescript,

Technologies: .NET, Microsoft SQL Server, XCode, Interface Builder

Database Management: Mongoddb, MySql

Developer Tools: GIT, GitHub, Netlify, Vercel, Docker, Azure ,Visual Studio

Frameworks And Libraries: Reactjs, Nodejs, Angular , Nextjs, Bootstrap UI, Express.js, Flask
